

INTEGRATED FLOOR SYSTEMS

LEVEL 3 POLISHED CONCRETE: GLOSS FINISH

The IFS level 3 system is our most popular polished concrete system. This produces a satin to gloss sheen on the concrete floor and excellent clarity for a significantly less cost compared to a “fully polished floor”. Drab, dirty looking floors can be transformed into stunning spaces with this system. Color / Dye can be added to this option to add a translucent color to the floor which gives the customer some design autonomy for their facility.

PROCESS INCLUDES

- Cleaning of the floor, repairs as requested.
- At least 4 diamond tool steps, application of an impregnating concrete hardener/densifier, and an optional application of a final floor guard for added spill and stain protection.
- Level 3 provides a satin to gloss finish sheen level, typically 20 points or greater on a 60-degree gloss meter.
- ***Color dye can be added to this system. (Our color goes “into” the floor, not just staining the top like other systems”)***
