

INTEGRATED FLOOR SYSTEMS POLISHED CONCRETE SYSTEMS

This system makes old floors easy to clean and adds service life and protection to new floors. This floor system is often used in warehouses and shops where owners are concerned about cost, but need to improve the aesthetics and clean ability of their floor.

POLISHED CONCRETE LEVEL 1 (\$)

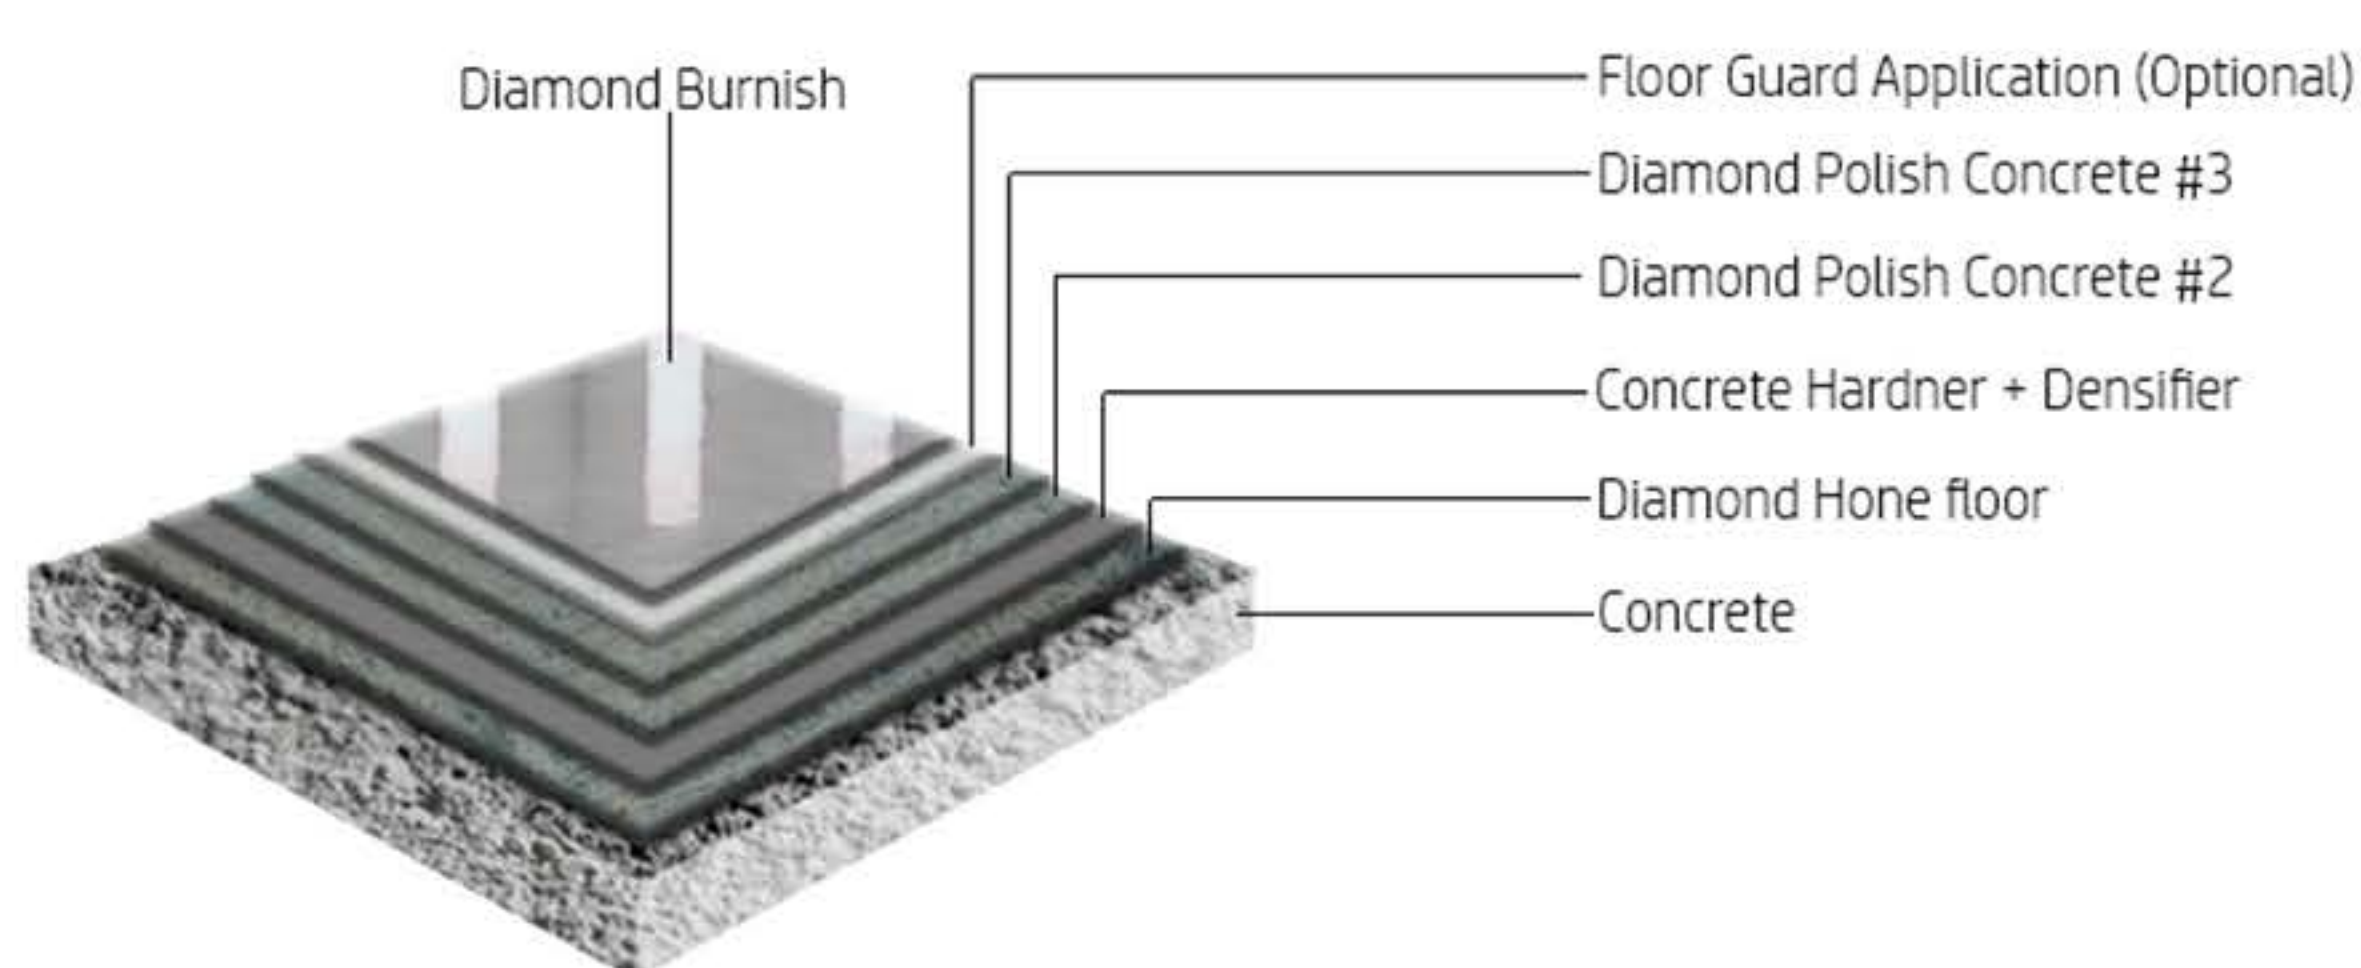

This flooring option greatly enhances old floors and makes new floors look fantastic. Many retailers use this option on new floors because it produces a great surface sheen, provides an easily maintainable surface, and is extremely affordable compared to other flooring options such as VCT that needs constant waxing.

POLISHED CONCRETE LEVEL 2 (\$\$)

This system provides a polished concrete sheen finish of satin to gloss sheen and excellent clarity for a significantly less cost compared to a "fully polished floor". Drab, dirty looking floors can be transformed into stunning spaces with this system.

POLISHED CONCRETE LEVEL 3 (\$\$\$)

This system provides a high sheen polished concrete floor finish. It will not only produce high gloss/reflectivity numbers, but also mirror colors from the objects surrounding the floor. This system offers the ultimate in aesthetics and durability.

POLISHED CONCRETE LEVEL 4 (\$\$\$\$)
